

Anas Alhalabi

Mobile Developer — iOS Engineer

 anas.alhalabi.official@gmail.com |  +966500370664 | [LinkedIn](#) | [GitHub](#) | [Website](#)

Professional Summary

iOS engineer with 4+ years of professional experience building and shipping production iOS/iPadOS applications, reusable SDK-ready modules, and cross-functional mobile experiences. Shipped two live App Store apps at Karage, including a customer-facing booking app serving 5,000+ users. Strong in Swift, SwiftUI, UIKit, Combine, Xcode, RESTful API integration, and modern MVVM architecture, with proven ownership of the full App Store lifecycle from submission and TestFlight beta distribution through ongoing updates and post-launch support.

Core Strengths

- iOS app development: Swift, SwiftUI, Combine, Xcode, UIKit
- MVVM architecture, async/await concurrency, Core Data persistence
- iOS SDK / module design and reusable API client architecture
- RESTful APIs, JSON parsing, secure storage, and data sync
- Push notifications, cloud messaging APIs, background updates
- Performance and memory tuning, crash reduction, app profiling
- App Store submission, release management, and post-launch support
- Git workflows, code review, CI/CD and release automation
- Cross-platform exposure: React Native and hybrid app patterns
- Agile delivery, product-aligned feature execution, UX collaboration

Professional Experience

Software Engineer — Karage | Dec 2021 – Present

- Shipped and maintained two production App Store apps: [My Karage](#), a customer-facing iOS booking and payments app serving 5,000+ users, and [Karage Kash](#), an iPadOS point-of-sale app — both built in Swift and SwiftUI.
- Built reusable internal iOS modules and API client components using async/await and Core Data for local persistence, simplifying REST API integration and eliminating duplicate implementation across app features.
- Owned App Store submissions and the ongoing update lifecycle for released apps, distributing beta builds via TestFlight and delivering new versions and post-launch fixes with smooth, on-time releases.
- Implemented remote push notification handling, in-app messaging workflows, and analytics instrumentation to drive engagement tracking.

- Raised delivery confidence by adding unit tests to core modules (~80% coverage), automated build pipelines, and release verification checks, reducing regressions.
- Led code reviews and enforced iOS best practices, improving code quality and consistency across the team.
- Partnered with UX designers, product managers, and backend engineers to translate feature requirements into scalable iOS architecture and user-friendly interfaces.

AI-Assisted Development (Claude Code) — Personal & Professional Projects

- Use Claude Code to accelerate iOS prototyping, debugging, and documentation, then review AI-generated Swift for correctness, performance, battery impact, and long-term maintainability before shipping to production.

Volunteer Mentor Lead — LabLab MENA | May 2023 – Jul 2023

- Mentored developer teams on mobile architecture, API design, and deployment strategies.
- Provided technical guidance on project planning, code quality, and app reliability.

Website Developer — Marn | Sept 2021 – Dec 2021

- Built responsive web experiences and partnered with designers to deliver on UX requirements.

Education

Bachelor of Science in Software Engineering — University of the People | June 2025

Technical Proficiencies

- Languages: Swift, C#, JavaScript
- Frameworks: SwiftUI, UIKit, Combine, Core Data, React Native (exposure), ASP.NET Core
- Tools: Xcode, Git, GitHub Actions, Docker
- APIs & services: RESTful APIs, push notifications, analytics integration
- Practices: CI/CD, unit testing, MVVM, async/await concurrency, TestFlight, code review, Agile, product collaboration

Languages

- Arabic — Native
- English — Professional Proficiency
